Problem Statement

The infamous MeToo movement has brought forward many victims of sexual assault and victims raised their issues on public platforms. We recognize that the victims often find it difficult to register cases against the predators because of fear of societal judgement and lack of availability of resources to go forward. We aim to provide such victims a platform to seek legal help from lawyers. We aim to help the victims who face sexual assault, domestic violence etc. can voice their concern and seek help from the right legal representatives and take the necessary steps of moving forward.

Application Key Functionalities & Proposed Entities:

Admin: Manages organizations employees and users

Assistant: Receives the request from the client. Can view schedule of the lawyers. Can assign the request further to the lawyer. Can send and receive messages from the client.

Lawyer: Receives request from the assistant. Can view and manage his schedule. Can send messages and schedule meetings with the client.

Client: Can report what he/she has faced and apply for a lawyer. The client can select what crime he/she wants to fight against. Depending on that lawyers will be suggested to the client. Then they can view the history of these lawyers and choose a lawyer.

Ecosystem Model
